

H-SENTS | Remote oil tank measurement system

Remote Sensing Solutions

An easily installed GSM-based system to monitor tank levels via the internet

Advantages for oil merchants :

- › Improved delivery schedules and efficient route planning
- › Optimised inventory management
- › Customer binding

Advantages for oil customers, such as building administrators and industries :

- › Eliminates the need for manual measurements
- › Receive timely and accurate data to better plan oil purchases
- › Avoid breakdowns due to a lack of oil
- › Lower capital requirements

Features

Hardware

- › Battery powered with 5 years autonomy
- › Fast and easy installation
- › No fixed phone line required
- › No mains power required
- › Up to 3 tanks monitored per telemetry unit
- › Robust design for outdoor and indoor installation

Software

- › Access through a standard internet browser
- › Easy import of data into your existing planning tool
- › Search and filter functions to view specific data
- › Graphical presentation of historical data by week, month or year

How it works

1. A level sensor and telemetry unit are installed on the oil tank.
2. Oil levels are regularly sent via SMS to a central database which automatically process the data for each tank.
3. Tank level data can be linked to merchant's delivery planning software and viewed via the internet.
